

STORAGE OF WASTE

It is the duty of all waste producers to prevent their waste escaping into the environment. The segregation of waste into separate containers or stockpiles can lead to lower costs by:

- Reducing disposal costs and landfill tax payments through preventing the contamination of inactive wastes by active wastes.
- Maximising the potential for reusing and recycling materials.
- Making it easier to see how much of each type of waste is being produced and hence where efforts to reduce waste need to be targeted.

DO

- ✓ Keep sites tidy and collect up any waste regularly.
- ✓ Use waste containers, skips or bays suitable for the type of waste being stored.
- ✓ Use skips with lids or cover them with sheets or nets to prevent dust and litter being blown out.
- ✓ Check that containers and skips are not corroded or worn out to minimize the risk of accidental spillages or leaks.
- ✓ Mark waste stores clearly with their intended contents and ensure labels on containers are kept in good order.
- ✓ Segregate waste before putting it into the designated containers.

DON'T

- ✗ **DON'T** throw materials into the wrong container or stockpile.
- ✗ **DON'T** contaminate one waste type with another.
- ✗ **DON'T** overfill skips or bays.
- ✗ **DON'T** give waste away, all waste taken off-site needs to be accompanied by paperwork.
- ✗ **DON'T** damage covers over, or bunds around, any skips or containers.
- ✗ **DON'T** burn or bury waste – it's illegal.
