

Frame & Cover Mortar Colour Change Briefing

What

We will be changing the colour of the Envirobred damming and flowable mortars used when installing our carriageway frame and covers.

Currently the Envirobred product is grey in colour however it will become Envirobred-Red and the packaging will be updated to reflect this.

New Envirobred-Red Damming Mortar

Old Envirobred Flowable Mortar

New Envirobred-Red Flowable Mortar

Why

We are making this change to ensure that the correct products are being used as part of a carriageway frame and cover installation and that it is easily auditable (i.e. we can retrospectively identify that the correct products have been used).

There will be no change in the performance or cost of the product, only the colour will be different.

When

We will be moving over to the Envirobred-Red product from 26th April 2021. From this date only Envirobred-Red flowable and damming mortars should be purchased and used for the installation of carriageway frame & covers. There will likely be a ~3 month transition period where the old Envirobred stock will need to be used up and the new Envirobred-Red product is used. There is no issue with using a combination of Envirobred & Envirobred-Red during this transition period. The Openreach audit team will specifically start looking for red mortars in Carriageway Frame & Cover installations from 1st August 2021.
