

Samsara Update: Obstructed Camera Event

M Group are removing the “obstructed camera” event from the test phase (beta mode), which will affect the drivers scores.

With immediate effect M Group will be removing the “obstructed camera” event from the test phase in Samsara. By removing this event from the test phase, the drivers score will now be directly affected by each event generated.

An obstructed camera event deducts points from the drivers score (per 1000 miles driven). An obstructed camera event is generated each time the ignition is switched off and restarted, so this can result in multiple events per day, which could have significant impact on the driver score.

As per the Occupational Road Risk Policy the camera should not be obstructed (page 14) so all drivers should be made aware of this and the possible disciplinary measures should this continue.

If the camera has been detached from its fitting please let CSC know as soon as possible so the camera can be removed from the system pending a refit.
